

HU-FRIEDY STERILISATION CONTAINER SYSTEM

Hu-Friedy's Sterilisation Containers are a reusable, rigid system used for the packaging of cassettes and instruments during sterilisation. An alternative to the wrap and pouch materials commonly used to package cassettes and instruments, Sterilisation Containers provide significant economic and environmental benefits along with enhanced safety.

FEATURES:

- Two choices of filters to meet customers' needs
- Enhanced locking device to secure the container
- Compatible with all B-autoclaves
- Improved filter support for a secure fit
- Lid and bottom are made of anodized aluminum making them lightweight with excellent drying properties. The aluminum alloy with an anodized oxide surface helps resist corrosion
- Two external display windows provide space for a process indicator card and container identification
